**Email:**  
[cangokceaslanx@gmail.com](mailto:cangokceaslanx@gmail.com)

**Telephone:**  
+905444850586

**Address:**  
Kirecburnu Mah. Bilim Sok.  
Apt-No: 4, Daire: 1, Istanbul /  
Turkey

**Postal Code:**  
34457

**Personal Hobby:**  
**Youtube:** I am interested in shooting videos related to my field on Youtube. I shoot videos for people to learn practical things from my experience. Those videos are mostly about web and application development. You can reach my channel using urls above. I have currently 1000+ subscribers from Turkey and continuously growing.( I am posting for 4 months and it reached 1000 ).

## 1) Introduction

Welcome to my Curriculum Vitae, I am Can from Istanbul, Turkey. I am currently graduated from Physics Department of Bogazici University. I have good mathematical skills thanks to my department. I have learned all the coding skills myself through my college years. I have been in professional projects as a freelancer for 2 years. I always cared what I do as both a freelancer and a worker. I always try to do my best in projects which are in my responsibility. I have skills to work as a team. I can also work single with/without supervisor. Besides, I can learn and adapt to new concepts.  
(Thank you for reading the passage.)

## 2) Skills:

- a) **Advanced Level:** HTML , CSS, JS, Bootstrap, NodeJS (ES5, ES6, JSX), PHP, Android Development (with Java), React, Redux, Express Socket.io, ElectronJS, CMS Systems WordPress and Drupal.  
( I used all types of Operating Systems and I have knowledge of SSH, FTP Bridges and GitHub Cli )
- b) **Medium Level:** React Native, C and C++

## 3) Experience and Projects:

I have worked as a Freelancer through my college years. I have created static and dynamic projects for 2 years. I didn't have time to work in a company.

### Reference Projects:

- a) **Turkfimalari.com:** <https://turkfimalari.com>
- b) **MySQLDBManage:** This is my personal project which lets you use MySQL or any SQL based system with methods.. It is a parser and organizer of a SQL Queries. You can also use error handling in methods. It is written in PHP however this php file can work as a REST API to extract data. So you can manage a complicated api in one document.  
(<https://github.com/cangokceaslan/MYSQLDBManage>)
- c) **Real Time Messaging With Socket.io:** This project is a no db messaging without cache or any storage with real-time availability. This project uses Express Framework

I am caring about this hobby because this can make me an influencer for young people who will change the world in the near future.

to serve as a HTTP server and Socket.io as a Socket Protocol. You can find the codes under my github account (<https://github.com/cangokceaslan/Nodejs-Real-Time-Chatting-via-Sockets.io>). You can also find the live example under this passage (Project is created for mobile platforms but works on desktop browsers). Only thing you need to do is send the url to your friend and start chatting anonymously. You can change md5 part into anything special to customize a chat room. There is no limit how many people join the room. (but they are complete anonymous).  
(<https://canjs.herokuapp.com/message.html?md5=8716A4DA9915653C8291D2FFCC3F60AC>)

#### **4) Education:**

Boğaziçi University - Physics Department (Bachelor Degree)
